PROFILE SUMMARY

DevOps & Cloud Engineer specializing in resilient, highly available infrastructure. Proven experience designing Multi-AZ AWS architectures, automating serverless workflows with Lambda, and building robust CI/CD pipelines using Jenkins. Focused on implementing Infrastructure as Code (IaC) to streamline deployments and optimize system reliability.

KEY SKILLS

- **Cloud & Infrastructure:** AWS (EC2, S3, RDS, VPC, Lambda, CloudFront, CloudWatch), Terraform
- **CI/CD & Containers:** Jenkins, Docker, Podman, Buildah, Docker Compose
- **Automation & Scripting:** Bash, Python, Linux, Rclone
- **Database & Analytics:** SQL, PostgreSQL, MySQL, Pandas, PowerBI

PROJECTS

AWS Scalable Web Architecture (Vocal4Local Migration) 🐙 [GitHub](#)

AWS (Route 53, CloudFront, ALB, ASG, RDS Multi-AZ), Terraform, SOPS

- Migrated a legacy monolithic application to a 3-tier AWS architecture using Terraform, ensuring high availability and fault tolerance through Multi-AZ redundancy.
- Secured application and database logic using private subnets and AWS WAF, achieving robust network isolation and edge protection.
- Implemented CloudFront global edge caching to optimize performance and reduce latency for international customers.

Jenkins CI/CD Containerized Pipeline 🐙 [GitHub](#)

Jenkins, Buildah, Podman, Python, Docker, Linux

- Engineered end-to-end CI/CD automation pipelines for Flask applications, streamlining build, test, and deployment stages.
- Implemented daemonless container workflows using Buildah and Podman, enhancing environment security by eliminating Docker socket dependencies.
- Provisioned reproducible development environments using Docker Compose to standardize local Jenkins stack deployments.

Multi-Cloud Cost Hygiene Automation 🐙 [GitHub](#)

LocalStack, Terraform, Python, GitHub Actions, AWS (EC2, EBS, S3, VPC)

- Built a local-first cloud cost detection workflow using LocalStack emulation and Terraform to provision baseline AWS infrastructure for identifying cost-wasting resources.
- Developed a Python janitor CLI to discover unattached EBS volumes, stopped EC2 instances, and unassociated Elastic IPs with dry-run and safe deletion modes.
- Implemented CI/CD pipeline via GitHub Actions automating LocalStack provisioning, Terraform validation, and janitor dry-run reporting with artifact uploads.

IPL Cricket Data Analytics & Visualization 🐙 [GitHub](#)

Python (Pandas), Jupyter Notebook, PowerBI

- Performed exploratory data analysis on IPL datasets using Python (Pandas), identifying key performance trends and player statistics for data-driven insights.
- Built interactive PowerBI dashboards to visualize match outcomes, enhancing stakeholder reporting and visual storytelling.

EDUCATION

B.Tech in Computer Science and Engineering [SRKR Engineering College, Andhra Pradesh, India](#)

2023-2027

CGPA: 8.7

CERTIFICATIONS

- **AI-Powered Cloud Engineer & AWS Cloud Fundamentals** – EduSkills Foundation
- **CyberSecurity & Software Testing** – NPTEL
- **Advanced SQL** – HackerRank | **Google Project Management** – Coursera
- **Data Analysis & PowerBI** – EdX
