Hiring Manager
Robo Dynamics India LLP
DevOps Internship

Dear Hiring Manager,

I am writing to express my interest in the DevOps Internship at Robo Dynamics India LLP. As a Computer Science student at SRKR Engineering College with hands-on experience building CI/CD pipelines, cloud infrastructure, and containerized applications, I am eager to bring my automation-focused mindset to your engineering team.

I have designed and maintained CI/CD workflows using GitHub Actions across multiple projects. For my Multi-Cloud Cost Hygiene Automation project, I built a standardized 7-stage CI/CD pipeline that automates Terraform validation and janitor reporting. I am comfortable with Docker and Docker Compose, having containerized a FastAPI backend with PostgreSQL for the RankGuard project, and I regularly use Linux for development, shell scripting, and infrastructure management.

On the cloud infrastructure side, I have hands-on experience designing resilient AWS architectures. I migrated a legacy monolithic application to a 3-tier, Multi-AZ architecture using Route 53, CloudFront, ALB, Auto Scaling Groups, and RDS Multi-AZ — all provisioned through Terraform. I also built a Python-based janitor CLI to detect and report orphaned cloud resources, reducing the risk of cost overruns. These projects demonstrate my ability to automate repetitive tasks, document workflows, and ship reliable infrastructure.

I am actively looking for an internship where I can deepen my DevOps skills while contributing to real-world systems. I am comfortable working independently or collaboratively, and I am always eager to learn new tools and best practices.

Thank you for considering my application. I look forward to discussing how I can contribute to Robo Dynamics India LLP.

Sincerely,
Mohan Kiran Bokka
